

Fast, economical way to mix your own feed

Leading turf care specialist GreenTek Solutions Limited will unveil the new Mega-Mix fertiliser mixing station on stand 244 at BTME 2023.

This revolutionary new product provides a fast, economical way for greenkeepers to mix their own feed.

With the rising cost of liquid concentrate, mixing feed from soluble straights can be up to 90% cheaper.

But the traditional way of doing this is time consuming and messy – risking blocking your sprayer jets if not thoroughly mixed.

The Mega-Mix enables soluble straights of NPK, sulphate of iron, and sulphate of ammonia to be thoroughly mixed without hot water. This avoids any messy straining and additional dilution.

Instead, you can thoroughly mix up to 1200 litres in the tank, using only cold water. The high-capacity pump transfers the solution through the filter unit and into your sprayer in just minutes. Then the next load can be mixing whilst you're spraying out the first.

The key benefits of this innovative product are:

- Save up to 90% compared with using liquid concentrate.
- Save time by spraying whilst the next load mixes.
- Safely add chemicals with integral fold-out step.
- Inline filter unit prevents nozzle blockages.
- High-capacity pump fills sprayer in minutes.

Ian Ellis, GreenTek managing director, comments: "We're delighted to bring this revolutionary product to the market and to be able to showcase it at BTME 2023. The Mega-Mix is clear proof of our ongoing commitment to recognising greenkeepers' needs and providing them with innovative solutions to save them time and money and enhance the quality of their courses."

GreenTek is recognised throughout the UK and around the world for high-quality, innovative turfcare equipment. Still driven by the same family passion that started the horticultural engineering business in 1969, GreenTek continues to innovate and provide solutions that are now established as essential tools by the best in the game.
