

PRESS RELEASE

SISIS to Showcase Proven Turf Performance at BTME 2026

Stand 252

SISIS, part of the Howardson Group, will return to BTME 2026 with a focused range of professional turf maintenance machinery, designed to support consistent playing conditions across golf courses and fine turf environments. Built for durability, serviceability and long-term performance, SISIS equipment is trusted by greenkeepers seeking reliable results season after season.

Multislit

The SISIS Multislit provides a proven alternative to traditional hollow tining. Using narrow blades to create clean slits, it improves water infiltration, gas exchange and root development with minimal surface disruption.

Unlike hollow tining, which removes material and can interrupt play, Multislit aeration allows greenkeepers to maintain playability while delivering meaningful agronomic benefits. Its speed and low-impact operation make it particularly valuable during the playing season.

Triplay with Fine Grooming Rakes

The SISIS Triplay is a single-pass maintenance system developed to improve efficiency without compromising surface quality. Ideal for golf fairways, it can be mounted to tractors via a three-point linkage or to utility vehicles with the appropriate frame, making it suitable for natural turf and hard porous surfaces.

Fitted with Fine Grooming Rakes, the Triplay delivers controlled surface grooming and thatch management. The 5mm spring tines lift grasses to improve presentation, help create a tilth in worn areas and provide effective grooming with minimal surface disruption.

Flexibrush

Designed for large turf areas such as golf fairways and sports grounds, the Flexibrush provides fast, effective brushing. It is ideal for brushing in topdressings, dispersing dew and lifting grasses prior to mowing, helping to deliver a clean, uniform finish. Floating

brush sections allow accurate contour following, while hydraulically folding outer sections simplify transport and storage.

Rotorake TM1000

The Rotorake TM1000 is a tractor-mounted scarifier and linear aerator engineered for effective thatch control and surface preparation. Floating units follow ground contours for consistent depth, while the contra-rotating reel throws debris forward to produce a clean, even finish. Interchangeable reels and simple depth adjustment make it a dependable renovation tool.

Javelin Aer-Aid

The Javelin Aer-Aid is a compact aeration solution designed to relieve surface compaction and improve air and moisture movement in fine turf areas such as greens and tees. Robustly built and straightforward to operate, it supports healthier root development and consistent playing performance.

Expert Support from the SISIS Team

The SISIS team will be available on Stand 252 throughout BTME 2026 to discuss turf challenges and provide practical guidance on selecting the right solutions.

For further information or to arrange a no-obligation demonstration, contact SISIS on 01332 824 777 or visit www.sisis.com

Notes to editors:

Sisis: A global leader in turf management, Sisis offers a full suite of high-performance walk-behind and tractor-mounted machines designed to maintain natural and hybrid sports fields. From de-thatchers and aerators to slicers, seeders, sweepers, vertical mowers and synthetic turf deep cleaners, Sisis equipment helps enhance surface integrity, player safety, and year-round playability.

Howardson Group is a family-owned British manufacturer based in Derby, serving professional and grassroots sport, contractors and local authorities through its SISIS, Hunter Grinders and Dennis brands.
