

Sand solutions at BTME

Mansfield Sand is delighted to be exhibiting again at BTME and visitors can find the company in the Green Zone on Stand 326.

Pioneers in the development and production of premium quality silica sand-based products for over 170 years, Mansfield Sand is a name that greenkeepers, course managers and sports turf managers put their trust in.

Whether for construction or on-going maintenance, the company has long been providing a wide range of products which are vital to the overall health and performance of a sports pitch.

Here is a snapshot of some of the innovative products:

Mansil Silica Sand Sports Range

Sourced from the company's Two Oaks Quarry in Mansfield where the Mansil range of Silica Sands is produced. These products are predominantly used in the construction and maintenance of a wide range of sports surfaces – from winter sports pitches, golf courses, bowling greens and all amenity turf areas.

Top Dressing

Produced for the fine turf market, Mansfield Sand's Soil Top Dressing is a manufactured homogenous product made from their own premium silica sands combined with top quality soils. All passed through a sterilising unit, over a 3mm screen to produce an easy to spread, stone and pebble free dressing. Mansfield Sand can also produce bespoke dressing blends and combine soil amendments into any product.

Sand Soil Rootzones

Mansfield Sand understands exactly what is needed to achieve the surface that turf managers require week-in-week-out and that is why their rootzones contain only the best quality materials to meet that demand. For renovation or construction, the company's superior rootzone blend Mansil 40 Silica Sand with a quality screened topsoil, guarantees the perfect start.

Sand Compost Rootzones

A range of premium quality sand organic material blends which are perfect for creating a rootzone where an organic rich material is required within the profile, aiding in the retention of nutrients whilst providing increased drought resistance.

Reinforced Rootzone

A range of reinforced rootzones developed to obtain greater use from natural turf surfaces whilst maintaining the high standards demanded by today's sports industry and meeting the

expectations of ground staff at all levels. Mansfield Sand's reinforcement technology provides stability and durability to all sand dominated rootzones allowing the pitch to remain free draining and consistent over the whole surface.

Products include Fibre Reinforced Rootzone – reinforced with polypropylene fibres; Fibrelastic Rootzone – reinforced with polypropylene fibres and flexible elastane fibres and Fibresand – particularly advantageous when grass cover has been reduced due to heavy usage and wear during the winter period.

Head to the Mansfield Sand stand at BTME where the experienced team will be able to explain how the products could make a significant improvement to your turf.
