A stop by the INFINICUT® stand at BTME always promises the latest in mowing technologies and the newest industry-leading innovations... and 2023 will be no different! Fresh from the factory and on show for the first time on stand 614 will be a dedicated trailer unit for the 22" MK6 models, together with a new 22" cutting unit launching specifically for the golf sector.

The INFINICUT® trailer has been designed to be simple to use, protective of the mower and competitively priced – offering the convenient and safe transportation of the 22" model between greens. It features a roller ramp on/off system, the rubber roller affixing to the mower stub axles before securing with a quick release locking and unlocking mechanism. The cutting unit is supported on a cushioned platform to minimise any movement in HOC. As standard, it is equipped with large surface area tyres to help cushion dynamic forces when traversing over uneven ground, with the option of swapping to regular transport tyres when required.

Introduced in direct response to demand from the golf market, a new 22" dedicated cutting unit will also be showcased. When married to the INFINICUT® traction unit, with its unique floating mechanism, overall balance and wireless control system, this new mower offers unbeatable cut performance and unparalleled contour following ability.

Its extruded aluminium main structure provides exceptional torsional rigidity and reduces oscillation keeping the mower 'on-cut' for longer. Lever action groomer engagement is precise and quick, with various groomer configurations available, along with simple adjustment, removal and installation of the bedknife for fast sharpening. The deflector shield is also adjustable to optimise the ejection of clippings.

Synonymous with the entire INFINICUT® range, the new 22" cutting unit features SMARTCut™ reel technology for optimal cut performance, precision and quality of finish. The SMARTCut™ reels,

manufactured in-house in Sheffield, are dynamically balanced and are guaranteed concentric to within 20µm across the entire length. The **SMARTCut™** forms part of the wider **TMSystem™** collection of grooming, mowing and maintenance cassettes which can transform the **INFINICUT®** or most mainstream models of multi-gang mowers into versatile systems for complete turf refinement.
