

DOUBLE TORO DEBUT AND MORE FROM REESINK TURFCARE

Reesink Turfcare brings not one but two new Toro machines to BTME. The next big thing in the world of aeration and utility vehicles from the leading turfcare manufacturer will be on stand 622, along with the next big thing for sustainable machinery cleaning.

Ten patents set the new ProCore 648s apart from its predecessor and will undoubtedly impress the UK's greenkeepers just as much as the 648 did when it launched years ago.

Jon Cole, Reesink's divisional business manager – Turfcare, explains what customers need to know about the updated time-tested classic: "New machinery from Toro is always a big draw in the industry and we expect interest in the ProCore 648s to be even more highly anticipated because the model it is based on was so well loved.

"Now, single-handed operation is possible thanks to having the primary controls on the new and improved handle, there's a broader range of hole spacing and true tine depth (5mm/0.25 inches) and precision is guaranteed from the off with the delay mode which guarantees maximum tine depth on the first entry into the soil. And customers will be pleased to know that upgrading to this new model doesn't mean new accessories are required, all those from the 648 are compatible with the 648s and can be used interchangeably."

And that's just a snapshot of what's new and better about the ProCore 648s, visit stand 622 to find out all the reasons why the s stands for superior.

Reesink Turfcare will also unveil the latest powerhouse from Toro to tackle all terrains: the new Toro Workman UTX 4x4. This robust four-wheel drive, full-sized utility vehicle has 25 percent more cargo capacity than that of others in its class, a towing capacity of up to 2000lbs and can handle curbs, inclines, hillsides, slopes and drops and all weathers with ease. It's road-ready and gives customers the options of lower RPMs for lower fuel consumption and sound in sensitive areas, or higher RPMs for more power to haul a heavier load up hills and inclines.

Reesink Turfcare is a staunch supporter of providing sustainable machinery to the golf and fine turf industry and will be bringing three stars from its line-up of all-electric options: the electric Greensmaster eTriFlex 3370 riding mower, Greensmaster eFlex 1021 pedestrian mower and Workman GTX Lithium utility vehicle will be on stand alongside product from its

UK golf cleaning and sustainability partner Bio-Circle. Bio-Circle's new EKO Natural Cleaning System and GT Maxi, the parts cleaner that requires no water and eliminates pollutant runoff into the water system are the perfect additions to Reesink's offering because being sustainable covers all aspects of machinery maintenance not just the power source.

Finishing off the line-up is more technology from Toro's myTurf Pro app. A true evolution for business management for golf courses a decade in the making, this comprehensive and intuitive asset management system cover everything course managers need to ensure the smooth, efficient, cost-effective running of their business. It brings fleet management but not as customers will know it, now they have an overarching tool for managing assets like cutting units, managing irrigation systems and ordering parts. With this bit of kit, life just got a whole lot easier.

Visitors to BMTE can see all this as well products from Reesink Hydro-Scapes and Reesink e-Vehicles on stand 622.
